

START LATER

Put seed down between mid-October and mid-November. This allows you to use less water to germinate.

CHECK YOUR SPRINKLERS

Turn sprinklers on to make sure they are spraying the correct area.

Repair any breaks in your system. Too much water can prevent germination.

WATER EFFICIENTLY

Seeds should be moist but not soaked.

Water little and often (NOT during daylight hours.)

Reduce irrigation frequency after seed sprouts.

Did
you
know?

After you put seeds down, you can cover them with grass clippings to prevent evaporation and give them shade.
